Overview

This template can be used as a quick company promo video/commercial.

Main Text Comp

This comp consists of multiple text layers that you can edit. Use the time slider to reveal the text's on screen position and then use the text tool to edit each text layer. If your text extends past the sliding vertical particle slider, then you will need to adjust the position of the vertical slider. The vertical particle slider has its keyframes open within the comp. Move from keyframe to keyframe to adjust the position of the slider to fit your text.

When you have finished editing the new text, you can setup the render queue. Click Composition from the top menu. Then click add to render queue. Setup your files for the output settings you want.

Hit Render.

Enjoy
